Complete Backroom Suite for the Independent Grocer

Designed with you in mind!

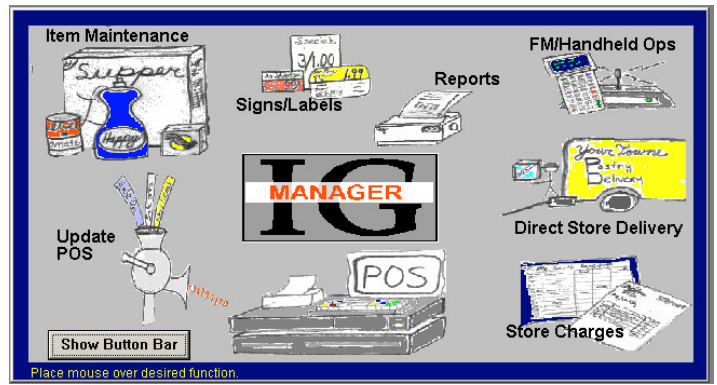

IGManager is a complete suite of functions any Independent Grocer needs to run their stores. Independents today must deal with more diverse product mixes, increased "special deal pricing" from their DSD vendors, more layering of sale and TPR prices, more advanced requirements for store account reporting. All of these on diminishing Gross Margins and predatory national chains.

IGManager has been developed "IN-THE-STORE" which means the operators had a say as to what they needed. More importantly, the operators told us what they DID NOT need. The result of this, is a suite of programs that provide just what you, the independent operator, require to control your store

IGManager is truly "designed with you in mind!"

IGManager is a complete set of programs developed to provide you with the tools you need to compete as an independent grocer.

Item Maintenance

Cost, Pricing, Sales, Sign info can all be accessed from one screen for each item. The user is kept away from the idiosyncrasies of the POS system requirements to set up special items or other features of the POS system. Features like WIC, AGE Restriction, Qty Limits and special pricing are available in a very user-friendly edit screen.

By flagging items in the main item database, items are exported to an industry standard data format. This data can be read by off-the-shelf label packages to create shelf tags, sales signs and others. The exported data can also include "Savings" and "Compare To" information to be used on the signs.

Unlike other packages, the DSD module is included in the IGManager Suite. With DSD, incoming product can be checked and the cost can be checked. Also, with receiving, the movement of any item can be viewed. This can greatly affect the \$ return from any DSD category.

Direct Store Delivery

By interfacing with the POS in either an offline or online method, store charge information and accounting can now be pulled directly from the POS into a basic accounting package providing Monthly Statement printing, aging reports and on-demand financial charges.

Store Charges

FM/Handheld Ops

The Radio-Frequency Handheld Terminal allows the store to check pricing out in the aisles. Besides price checking, price maintenance, sales and TPR setting, and DSD receiving can all be done outside of the office. Since IGManager is a true 32-bit application, the FM operations do not interrupt item maintenance or other functions on the backroom computer.

Reports

Just a list of some of the reporting capabilities of the IGManager Suite:

- Item Sales by UPC, Description, Net \$ and Qty sales
- Ad/Markdown report by Dept, SubDept, Category
- Items on/off Sale or TPR for any date range
- Item listing by various ranges
- Hourly Department Sales
- Historical Department Sales for any date range
- Item movement report
- Gross margin report for various ranges
